

ARI Internal Moonlighting Policy

January 2025

1. After hours work can be performed by the hour with time and number of cases with basic breakdown submitted to our bookkeeper at least every two weeks (Excel spreadsheet available from Melissa)
2. After hours work can be performed when the Summa outpatient list is over 150 (no moonlighting can be performed when All unread OP list falls below 150 at any time)
3. Full time and part time members can perform this work. Exclusions are full time mammographers who do not read general work, 1099 employees and junior group members prior to becoming a shareholder. Any changes are subject to board approval.
4. Reimbursement is currently \$325/hr at the time of this writing
5. Extra work can be performed at any time but strongly discouraged immediately before or after regular scheduled shifts.
6. Maximum of 1 hour moonlighting allowed on days when performing a regular 9 hour shift or admin or project day. If moonlighting in the evening after a 9 hours shift, then the radiologist needs to reach the recommended minimum cases completed, including 6/hr for OP shifts (54 cases) and 10/hr for ED shift (90 cases).
7. Work expectation: approximately 20-30 xray cases or 6-7 cross-sectional cases per hour.
8. All moonlighting will be reviewed every month by board leaders or operations committee leaders and submitted for open review at board meetings.
9. Out of state moonlighting is subject to approval by the board, since both the radiologist requires a local state license (except for Hawaii) and ARI must be registered in the state for Medicare billing. As of 2025 ARI is registered with Medicare in: Hawaii, Florida, Georgia, Massachusetts, Nevada, Utah, Washington
